PRASHU PANDEY

Full Stack Developer

Noida, India | +91 98710 51838 | prashupandey0210@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full Stack Developer shipping production web and mobile products in TypeScript — React and Next.js on the web, React Native (Expo) on mobile, Node.js/Express with Prisma, PostgreSQL, and Redis on the backend. Has delivered payment and loyalty systems, payroll and attendance platforms, AI-powered search, and BI dashboards end to end, with **3 mobile apps live on the App Store and Google Play**.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3

Frontend: React 18/19, Next.js 15, React Native (Expo), TanStack (Start, Router, Query, Table), Tailwind CSS, NativeWind, shadcn/ui, Radix UI, MUI, Zustand, React Hook Form, Recharts

Backend & APIs: Node.js, Express.js, tRPC, REST APIs, Prisma, Drizzle ORM, Zod, BullMQ, Socket.IO, JWT, OAuth 2.0, RBAC, Razorpay, Stripe, Webhooks

Databases & Caching: PostgreSQL, MySQL, MSSQL, Redis, Schema Design, Query Optimization, Migrations

Cloud & DevOps: AWS S3, Docker, GitHub Actions CI/CD, Firebase (FCM, Crashlytics, Analytics)

AI: Google Gemini API, LLM Integration, RAG (Retrieval-Augmented Generation), Prompt Engineering, Structured Output

EXPERIENCE

Full Stack Developer — RemoteState

February 2025 – Present

- Own end-to-end delivery across 3 products and 6 codebases — 3 React Native apps live on the App Store and Google Play, 2 Next.js web platforms, and a TypeScript/Express backend — from database schema through release.
- Thread single capabilities through Prisma models, REST/tRPC APIs, admin console, and mobile UI in one cycle, working directly with founders and product owners.
- Enforce end-to-end type safety with TypeScript strict mode, Zod-validated contracts, and tRPC/Prisma-generated types, eliminating an entire class of runtime API mismatches.
- Strengthened release engineering by standardizing pnpm, fixing Docker and CI/CD builds, adding Husky pre-commit formatting and Crashlytics bundle tracking, and leading an Expo SDK 54 → 56 upgrade with an Expo Router migration and refreshed native build configuration.

PROJECTS

Dazzl | *On-Demand Beauty & Grooming Services Platform — 3 mobile apps, admin console (81 pages), 232-model backend* | *React Native (Expo), Next.js, Express, Prisma, PostgreSQL, Redis, Razorpay, GCP*

- Built **Dazzl Pass**, a paid loyalty program, end to end across 4 codebases: Prisma models, purchase and webhook APIs with Redis-cached entitlement checks, **Razorpay** standalone and booking-bundled checkout, cart discount logic, consumer-app upsell UI, and an admin pass-holder console.
- Engineered a **professional payouts system** with a configurable salary and incentive calculation engine, attendance-driven payout-day formula, per-metric breakdown with visible formulas, RBAC-gated access, and one-click **Excel export**.
- Delivered an **attendance platform** across admin and mobile: **geofenced check-in/check-out** backed by background location tracking, automatic late and overtime computation, split and bulk approval actions, leave management, and monthly summaries.
- Integrated a scheduled **hub weather service** (OpenWeatherMap) surfacing live rain state to operations and injecting a 15-minute ETA buffer into availability checks during rain.
- Shipped a **server-driven, feature-flagged checkout flow**, photo-verification gates requiring kit and completion photos before a booking can start or close, and a **trainer performance dashboard** with 4-week rolling rating metrics.

Orchid Analytics Dashboard | *Hotel Business Intelligence Platform* | *React 19, TanStack Start (SSR), tRPC, Drizzle ORM, Prisma, PostgreSQL, MSSQL, Docker*

- Designed a **dual-database architecture** bridging PostgreSQL (app state via Drizzle ORM) and MSSQL (legacy hotel data via Prisma) behind **11 type-safe tRPC routers**, enabling analytics on legacy PMS data with no migration.
- Visualized hotel performance through **10+ interactive KPI charts** and a multi-property compare dashboard with independent date ranges and business-unit filters, powered by dynamic SQL aggregation across day/week/month/quarter/year periods.
- Automated operational monitoring with a **real-time alert engine** using 3 configurable rule types, consecutive-period matching, multi-level escalation, and email notifications, deployed via **Docker and GitHub Actions CI/CD to AWS ECR**.

Education Planner | *Study Abroad Consultancy Platform* | *Next.js 15, React 19, tRPC, MySQL, Drizzle ORM, Google Gemini, Stripe, AWS S3*

- Architected a **retrieval-augmented AI search pipeline** grounding Google Gemini 2.5 Flash on filter vocabularies and sample programs retrieved from the database, converting natural-language queries (e.g. “MBA in Canada under $30k”) into **schema-constrained JSON** across **20+ filter dimensions**.
- Developed a **multi-role SaaS** with 12 RBAC roles, Stripe payments, wallet system, LeadSquared CRM pipeline, application tracking, and a full CMS across **51 API service modules**.
- Optimized organic reach with server-rendered pages for **1,000+ university listings**, JSON-LD structured data, automated sitemaps, and AWS S3 presigned-URL uploads.

EDUCATION

Master of Computer Applications (MCA) — KIET Group of Institutions | 8.04 SGPA — *October 2023 – October 2025*

Bachelor of Computer Applications (BCA) — Galgotias University | 9.32 CGPA — *September 2020 – May 2023*
